

#### PRODUCT NAME

Einar® 501

Einar® 515

Einar® 535

Einar® 543 and Einar® 544

#### **APPLICATION**

**Anti-stat coating for EPS** 

Cooling time enhancer for EPS

Anti-stat and cooling time enhancer blend

EPS full blends of GMS/GTS/Zinc Stearate

**Palsgaard®** 

## The plant-based, food-grade coating additives for EPS

Palsgaard's **Einar**® polymer additives includes everything you'll need to create successful EPS products: Plant-based and food-grade anti-static additives and cooling time enhancers and blends of these.

We also offer all-in-one solutions complete with anti-static protection, cooling time enhancement and zinc stearate, offering a convenient way to apply EPS coatings.

Our services include full technical support based on many years in the industry of fine-sprayed glyceride esters.

#### **KEY FEATURES**

- Highly effective plant-based anti-static additives and cooling time enhancers for the EPS process
- High-quality fine-particle-sized glyceride esters of fatty acid esters from vegetable oils
- Custom-designed for EPS applications
- Worldwide regulatory approval for food-contact applications

#### **KEY BENEFITS**

- Excellent anti-static protection via coating
- Ready-to-use coating blends
- Fine powders with high coating efficiency
- Can be used for various EPS bead sizes by adjusting concentration
- Suitable for both EPS and XPS beads
- Consultancy and technical support available from our applications team

#### **EINAR® POLYMER ADDITIVES**

## Einar® 501 for EPS anti-stat coating

**Einar® 501** is an efficient vegetable-based GMS anti-stat that will help improve flow properties of EPS beads during storage, transportation and through the pre-expansion step as well as during screening and moulding by reduction of agglomerates and attraction to processing equipment.

**Einar® 501** is a fine powder with excellent coating properties and the recommended use level is 0.1 - 0.6% depending on EPS bead size. Smaller beads require higher concentrations due to a higher specific surface area.

## Einar® 515 for EPS cooling time enhancement

**Einar® 515** is a plant-based GTS cooling time enhancer which will help reduce cycle times by facilitating a faster exchange of foaming agent and air in the moulding process.

**Einar® 515** is a very fine powder and has high coating efficiency and should be used at loading levels of 0.1 - 0.4% to obtain the best performance on cooling time.

## Einar® 535 for EPS anti-static and cooling time enhancement in one

**Einar® 535** is combining GMS and GTS in one blend bringing the benefits of both components along with simplifying handling and processing.

#### Guidelines for use

The fine powder of **Einar® 501**, **Einar® 515** and **Einar® 535** is applied to the surface of the beads, leaving a thin functional coating.

## Einar® 501 product details

| Physical/chemical | monoglyceride, min.                         | 90%         |  |
|-------------------|---|-------------|--|
| properties:       | free fatty acids, max.                      | 1.5%        |  |
|                   | free glycerol, max.                         | 1%          |  |
|                   | melting point, approx.                      | 68°C        |  |
|                   | particle size average                       | 50 μm       |  |
|                   | colour                                      | off-white   |  |
|                   | form at 25°C                                | fine powder |  |
| Storage           | Should be stored in a cool and dry place in |             |  |
| conditions:       | tightly closed packaging                    |             |  |
| Packaging:        | 15kg/33.1 lb net in carton with inner       |             |  |
|                   | polyethylene bag                            |             |  |
| Product form:     | Einar® 501 comes in fine powder form        |             |  |
| Total shelf-life: | Min. 24 months                              |             |  |

## Einar® 515 product details

| Physical/chemical | triglyceride                                |             |
|-------------------|---|-------------|
| properties:       | free fatty acids, max.                      | 1%          |
|                   | free glycerol, max.                         | 1%          |
|                   | melting point, approx.                      | 60°C        |
|                   | particle size average                       | 50 μm       |
|                   | colour                                      | off-white   |
|                   | form at 25°C                                | fine powder |
| Storage           | Should be stored in a cool and dry place in |             |
| conditions:       | tightly closed packaging                    |             |
| Packaging:        | 15kg / 33.1 lb net in carton with inner     |             |
|                   | polyethylene bag                            |             |
| Product form:     | Einar® 515 comes in fine powder form        |             |
| Total shelf-life: | Min. 24 months                              |             |

## Einar® 535 product details

| Physical/chemical | monoglycerides                              | 45 - 55%    |
|-------------------|---|-------------|
| properties:       | particle size average                       | 50 µm       |
|                   | colour                                      | off-white   |
|                   | form at 25°C                                | fine powder |
| Storage           | Should be stored in a cool and dry place in |             |
| conditions:       | tightly closed packaging                    |             |
| Packaging:        | 15kg / 33.1 lb net in carton with inner     |             |
|                   | polyethylene bag                            |             |
| Product form:     | Einar® 535 comes in fine powder form        |             |
| Total shelf-life: | Min. 24 months                              |             |

#### **EINAR® POLYMER ADDITIVES**

## Einar® 543 and Einar® 544 full blends of GMS/GTS/Zinc Stearate

**Einar® 543** and **Einar® 544** are ideal solutions for EPS producers aiming to optimise production processes and improve the environmental profile of their products in one step.

These all-in-one solutions, complete with zinc stearate, eliminate the need to manage multiple individual components.

The ready-to-use pre-blends offer precise dosing, safer and faster handling, and opportunities for streamlining additive inventory – making production more efficient and resource-conscious

**Einar® 543** and **Einar® 544** are blends of GMS, GTS with varying zinc stearate content. It is often a matter of the producers specific processing and handling whether more lubrication in the form of a higher zinc stearate content is needed.

#### Guidelines for use

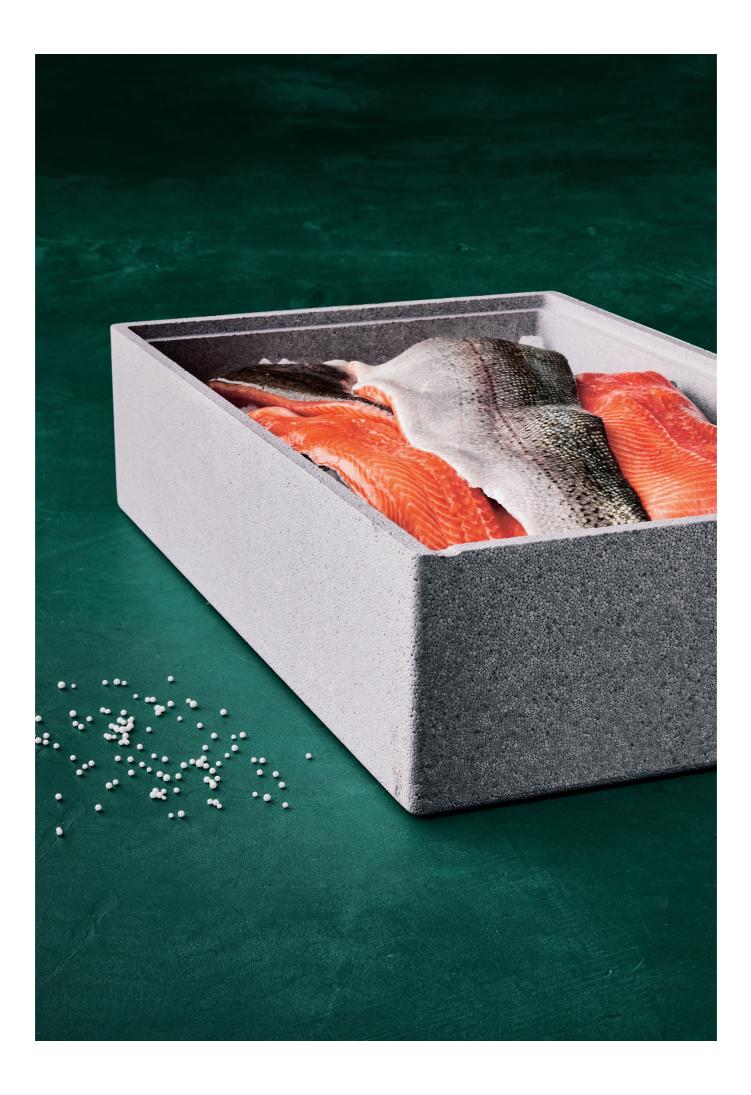

The fine powder of **Einar® 543** and **Einar® 544** is applied to the surface of the beads, leaving a thin coating carrying all the functional benefits in one.

## Einar® 543 product details

| Physical/chemical | mix of GMS/GTS/zn. st.                      |             |
|-------------------|---|-------------|
| properties:       | monoglycerides                              | 40 - 45%    |
|                   | zinc stearate, approx.                      | 15%         |
|                   | particle size average                       | 40 μm       |
|                   | colour                                      | off-white   |
|                   | form at 25°C                                | fine powder |
| Storage           | Should be stored in a cool and dry place in |             |
| conditions:       | tightly closed packaging                    |             |
| Packaging:        | 15kg / 33.1 lb net in carton with inner     |             |
|                   | polyethylene bag                            |             |
| Product form:     | Einar® 543 comes in fine powder form        |             |
| Total shelf-life: | Min. 24 months                              |             |

## Einar® 544 product details

| Physical/chemical | mix of GMS/GTS/zn. st.                      |             |  |
|-------------------|---|-------------|--|
| properties:       | monoglycerides                              | 35 - 40%    |  |
|                   | zinc stearate, approx.                      | 25%         |  |
|                   | particle size average                       | 30 μm       |  |
|                   | colour                                      | off-white   |  |
|                   | form at 25°C                                | fine powder |  |
| Storage           | Should be stored in a cool and dry place in |             |  |

| Total shelf-life: | Min. 24 months                              |             |  |

# Plant-based, food-grade solutions for the polymer industry

### Health and Safety

**Einar**® polymer additives are safe to use, identified as non-toxic and not expected to cause irritation to the skin, eyes or lungs. They are made from renewable, plant-based material under hygienic conditions. SDS is available on request.

#### Legal status and other regulatory information

Einar® 501, Einar® 515, Einar® 535, Einar® 543 and Einar® 544

• Food contact compliance for EU, USA, Mercosur, China Detailed information available on request
